

# GEOMETRIA SACRA

## THE LABYRINTHS OF LUCA PACIOLI

Jan Dotřel involves us in a deep investigation into the Divine Design, Sacred Geometry, Gematria, the mathematical design of a historical matrix and the interconnection of all things. What is truly fascinating is how these cosmic designs resemble various familiar structures, such as neural networks, root systems, mycelial networks, the Internet, and modern cities. We live in a fractal universe, where "as above, so below" is real, connecting everything in harmonious patterns. It is said that God's first thought is represented by a circle, which exists alone and repeats itself. It forms the basis of most sacred geometric patterns.

Nature-related geometry is the feedback loop of the Universe learning more and more about itself. In all the infinite variety of forms of nature there is a mathematical logic expressed geometrically, which emerges from the same field of information and creates the same structures at all scales. Geometry, by Jan Dotřel is able to create representations of different dimensions through shapes linked to the universe.
